## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to because the currently filed drawings are not seemed to be formal drawings. Figures 5 and 14 are printed dark and do not show clear details. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2839

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 and 3-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin (US 6,786,738 B2).

Lin discloses an apparatus comprising a printed circuit board (PCB) 5 having a plurality of contact pads 51; a connector 1 mounted on the PCB 5; and an integrated circuit (IC) package 6 for insertion into the connector 1, having a plurality of input/output (I/O) lands 61. Figure 4 shows the connector 1 with a plurality of contact opening 11 including a vertical pitch having a first uniform distance and a horizontal pitch having a second uniform distance. Figures 7 and 8 shown pitch distances of the I/O lands 61 of the IC package 6 and the contact pads 51 of the PCB 5 match with the contact opening 11 of the connector 1. Although Lin does not states the connector 1 being a zero insertion force (ZIP) connector, Figure 1 clearly shows that the connector 1 of Lin is a ZIP connector because the IC package 6 is simply dropped into the connector 1.

FIG. 4

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 9, 11-13, 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin in view of Katz (US 6,310,398 B1).

While Lin discloses the connector 1, PCB 5 and IC package 6 having a Land Grid Array (LGA), Lin does not disclose a Pin grid Array (PGA).

In the "BACKGROUND OF THE INVENTION," Katz discloses that an integrated circuit (IC) package commonly has interface schemes Pin grid Array (PGA), Ball Grid Array (BGA), and Land Grid Array (LGA) and a plurality of input/output (I/O) conductors. Also, the IC package is mounted on a printed circuit board (PCB) having a matching pattern of pins or pads on the IC package. Furthermore, the IC package can usually interface with a socket (connector) that is mounted on the PCB.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the apparatus taught by Lin such that it would have a PGA as taught by Katz because it only deals with using PGA, one of the commonly known interface schemes, instead of LGA.

***Response to Arguments***

6. Applicant's arguments with respect to claims 1, 3-9 11-13 and 15-16 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
